DISPENSERMILK

DISPENSERMILK

CUTTING-EDGE TECHNOLOGY – RELIABILITY – EASE OF USE

The **DISPENSER MILK** by ZetaTec makes daily milk dispensing to calves easier and faster. Thanks to its dispenser nozzle, the Dispenser can provide each calf with the exact programmed amount of milk.

The electric drive and speed control makes moving the equipment effortless.

Even powdered milk preparation is simplified with the milk mixing and heating system.

Furthermore, **DISPENSER MILK** pasteurizes the milk. The electric heating coils in the water tank liner can heat the milk to the pasteurizing temperature of 65 °C. The milk is kept at temperature for the time needed to eliminate the bacteria. Well water is then used to cool the milk to 40 °C for feeding the calves.
